Science and Technology,

R.T.M. Nagpur University, Nagpur.

Syllabus for B.Tech. Chemical Engineering

(Third Semester)

Material & Energy Balance Computations (Theory)

Subject Code: CE - PCC -301 T(BCE)

Lecture : 3 Hrs **Tutorial: 1 Hr** **No. of Credits: 04**

University Assessment: 70 Marks **College Assessment: 30 Marks**

Duration of Examination: 3 Hours

Objective: This course will prepare students to make analysis of chemical processes through calculations, which need to be performed in the chemical processing operations. The students are introduced to the application of laws and also to formulate and solve material and energy balances in processes with and without chemical reactions.

Course outcomes: After completion of the course, students will be able:

CO1: To understand the basic concept, units, and conversion of chemical process calculations.

CO2: To understand the application of various gas laws, volume changes, humidity and saturation, solubility and crystallization.

CO3: To perform material and energy balances on chemical processes/equipment without and with reactions.

CO4: To do energy balances on chemical processes/equipment without and with reactions.

CO5: To perform energy balances on chemical processes/equipment with chemical reactions and heat and combustion problems

Unit I Basic principles, the concept of gram atom and gram mole, conversion of units from one system to another, concept of excess reactant, conversion and yield, Selectivity and degree of completion of reaction.

Unit II Ideal gases, partial pressure, vapor pressure, application of ideal gas laws, volume changes with changes of composition, dissociating gases, humidity and

saturation, solubility and crystallization.

Unit III Material balance without chemical reaction, recycle, purge and bypass calculations, material balance with chemical reaction.

Unit IV Energy balance without chemical reaction, combined material and energy balances.

Unit V Energy balance with chemical reaction, combined material and energy balances, Fuels and combustion, types of fuels, heating values of fuels, theoretical and excess air, heat and combustion problems

Books Recommended :

1. Stoichiometry and Process Calculation by Narayana K.V., Laxmikutty B. , Prentice Hall of India 2006.

2. Basic Principles and Calculations in Chemical Engineering by Himmalblau D.M. & Riggs, J.B.

3.Prentice Hall of India 6 th Edition (2011)

Stoichiometry by Bhatt B.I. , Vora S.M. Tata-McGraw-Hill 4 th Edition 2004

Chemical Process Calculation by Hougen A., Watson, M. John Wiley & Sons, Third Edition 2000

Particle & Fluid Particle Processing

Subject Code : CE - PCC -302T (BCE)

Lecture : 03 Hrs Tutorial: 01 Hr No. of Credits : 04

University : 70 Marks College Assessment :30 Marks

Duration of Examination: 3 Hours

Objective: The course aims at providing an overview of the approaches, methods and techniques of particle and fluid particle processing. The objectives include the understanding of concepts like physical properties and handling of solids and solid-fluid mixtures, separation processes for solid-solid and solid-fluid mixtures, concepts of filtration, sedimentation, agitation and mixing of liquids , and flow through packed and fluidized beds.

Course outcomes: After completion of the course, students will be able to understand:
CO 1: Solid particle characterization & relevance of fluid and particle mechanics and mechanical operations in chemical engineering

CO 2: Crushing and screening principles and equipment's used for them.

CO 3: Handling & transportation of solids and fluid solid systems.

CO 4: Separation of solids from fluids by using sedimentation and basic principles, operation and equipment's used for them.

CO 5: Separation of solid from fluids by using Filtration, flotation and classification and basic principles, operation and equipment's used for them

Unit-I: Relevance of fluid and particle mechanics and mechanical operations in chemical engineering process. Solid particle characterization: particle size, shape and their distribution, relation among shape factors and particle dimensions, specific surface area, measurement of surface area. Flow around immersed bodies, concept of drag, boundary layer separation, skin and form drag, drag correction

Unit –II Solids: size reductions, types of equipment's used in the various stages of reductions, laws of crushing and grinding power requirements. Screening screening equipment's, effectiveness of screens, sieve analysis, particle size distribution, classification of particles, size enlargement, nucleation and growth of particles.

Unit-III Handling of solids: Belt conveyer, screw conveyer, flight conveyer, bucket conveyer, pneumatic conveyer. Capacity and power requirement of conveyer, transport of fluid solid system, terminal settling velocity, hindered settling velocity.

UNIT IV: Separation of solids from fluids: sedimentation free settling, hindered settling, Kynch theory of sedimentation, design of settling tank, sedimentation equipment's Centrifugation principles of a centrifuge. Collidal particles: stabilization, flocculation

UNIT V: Filtration: filtration theory, equipments for filtration, constant rate and constant pressure filtration filter calculation optimum filtration and filter aid, equipments used for filtration. Classification Principle of classification, equipment's for classification, design of cyclone and hydrocyclone, flotation cells and calculation for flotation cell. Application of fluidization.

Thermodynamics II

Subject Code: CE - PCC -303T (BCE)

Lecture : 3 Hrs **Tutorial: 1 Hr** **No. of Credits: 4**

University Assessment: 70 Marks **College Assessment: 30Marks**

Duration of Examination: 3 Hours

Objective: The objective of this course is to introduce the principles of Chemical Engineering Thermodynamics and illustrate their application to design of chemical process plants. To understand the laws of thermodynamics and their applications in the flow/non-flow processes. To familiarise with the estimation of volumetric and key thermodynamic properties of real fluids and mixtures, solution thermodynamics, phase and chemical reaction equilibria. To understand the applications phase and reaction equilibria which include liquid-liquid equlibria, vapour liquid-liquid equlibria, solid-liquid, and solid-vapour equilibria.

Course outcomes: After completion of the course, students will be able to:

CO 1: Understand and apply the laws and rules of thermodynamics, equilibrium and phase rule.

CO 2: Understand various thermodynamics properties and relationships, and coefficients of species and their properties.

CO 3: Understand Liquid phase properties from VLE, Models for excess Gibbs energy, heat effects and property change on mixing

CO 4: Understand different Equilibria, equilibrium criterion , evaluation of equilibrium constant and equilibrium conversion at different conditions.

CO5: Understand molecular/statistical thermodynamics

Unit I .Review of first and second law of thermodynamics ,Vapor-liquid equilibrium: phase rule, simple models for VLE;VLE by modified Raoult's law; VLE from K-value correlations; Flash calculations.

Unit II :. Solution Thermodynamics: fundamental property relationships, free energy and chemical potential, partial properties, definition of fugacity and fugacity coefficient of pure species and species in solution, the ideal solution and excess properties

Unit III: Liquid phase properties from VLE, Models for excess Gibb's energy, heat effects and property change on mixing. Introduction to UNIFAC and UNIQUAC models

Unit IV: Liquid-Liquid Equilibria; Vapor-Liquid-Liquid Equilibria; Solid-Liquid Equilibria; Solid-Gas Equilibria., Chemical reaction equilibria: equilibrium criterion, equilibrium constant, evaluation of equilibrium constant at different temperatures, equilibrium conversion of single reactions, multireaction equilibria.

Unit V: Introduction to molecular/statistical thermodynamics

Suggested Text Books

1. J.M. Smith, H.C. Van Ness and M.M. Abbott, "Introduction to Chemical Engineering Thermodynamics", 7th edition, McGraw-Hill International Edition,2005.

2. K.V.Narayanan, "Chemical Engineering Thermodynamics", Pentice Hall India 2006

Suggested References Books

1. S.Sandler, "Chemical, Biochemical and Engineering Thermodynamics", 4 th edition,Wiley,India.

2. Y.V.C.Rao, "Chemical Engineering Thermodynamics", University Press, Hyderabad,1997.

Material Science:

Subject Code: CE -GES-304 T (BGE)

Lecture : 03 Hrs **No. of Credits : 03**

University Assessment:70 Marks **College Assessment :30 Marks**

Duration of Examination: 03 Hours

Objectives:

- The objective of the course will be to give the students a basic introduction to the different classes of materials relevant to engineering in general and Chemical Engineering in particular.
- The intent of the course will be to relate the underlying molecular structure of the materials to their physical and chemical properties and their processing and performance characteristics.

Course outcomes: After completion of the course, students will be able to understand:

CO 1: Various bonding between atoms, thermal expansion, elastic modulus and melting point of materials & role of materials selection in design.

CO 2: Miller Indices, packing of atoms, close-packed structure, ionic solids, glass and polymers.

CO 3: Different imperfections, impurities, dislocations, defects, and stacking faults.

CO 4: Different structure and strength of materials, strain behaviour of metals, ceramics and polymers.

CO 5: Amorphous materials, Polymer nano-composite materials and Environmental Degradation.

Unit 1: Introduction to materials, bonding between atoms: metallic bonding, ionic bonding, covalent bonding, Van der Waals bond, thermal expansion, elastic modulus and melting point of materials, Role of materials selection in design, structure-property-processing-performance relationships.

Unit 2: Miller Indices of planes and directions, packing of atoms inside solids, close-packed structures, structure of ceramics, ionic solids, glass and polymers, density of various materials.

Unit 3: Imperfections in solids: vacancies, equilibrium concentration of vacancies, interstitial and substitutional impurities in solids, dislocations, types and characteristics of dislocations, interfacial defects, stacking faults.

Unit 4: Structure of materials and Strength of Materials: Yield strength, tensile strength and ductility of materials: stress strain behaviour of metals, ceramics and polymers, tensile test, plastic deformation, necking, creep behaviour and fatigue.

Unit 5: Amorphous materials, Polymer nano-composite materials, Environmental Degradation: Corrosion and oxidation of materials, prevention, Biomaterials.

Suggested Books

1. V. Raghavan, Materials Science and Engineering: A First Course, 5th Edition Prentice Hall India, 2004.
2. S. Upadhyaya and A. Upadhyaya, Material Science and Engineering, Anshan Publications, 2007.

Suggested Reference Books

1. R. A. L Jones, Soft Condensed Matter, Oxford University Press, 2002.
2. William D. Callister, David G. Rethwisch, Materials Science and Engineering: An Introduction, Wiley Publisher.
3. B. S. Mitchell, An Introduction to Materials Engineering and Science for Chemical and Materials Engineers, John Wiley & Sons, 2004.

Maths –III:

Subject Code: CE-BS-305 T (BGE)

Lecture: 03 Hrs **No. of Credits: 03**

University Assessment: 70 Marks **College Assessment :30 Marks**

Duration of Examination: 03 Hours

Course objectives

1) To develop the logical understanding of the subject.
2) To acquire mathematical skills such that the students are able to apply mathematical methods and principals in order to solve engineering problems of various fields.
3) To make the students aware about the significance and interrelation between Mathematics and Engineering.

Course Outcomes:

Students will be able to

CO1 Represent the solution of Differential Equations in the form of series.
CO2 Understand Laplace transforms and inverse Laplace transforms of various functions involved in engineering field.
CO3 Apply Laplace transform to solve Ordinary and Partial Differential Equations as well as to evaluate the integral equations & solve hyperbolic, parabolic, elliptical PDEs using various Numerical methods and apply these methods to solve various engineering problems.
CO4 Apply Fourier Transform to Solve Integral Equations.
CO5 Evaluate the integration of function of complex variable. Also, able to transform the function from one plane to another.

Unit I: Series Solution and Special Function

Method of infinite series solution for ordinary D. E. when x = o as a ordinary point & x = a as a regular singular point by Fresenius method,

Special Function: Bessel's equation, Bessel’s functions: recurrence relations, orthogonality property, generating function, Legendre's equation, Legendre Polynomials: Rodrigue's formula generating function, recurrence relations, orthogonality property.

Unit II: Laplace Transforms

Important Formulae, Properties of Laplace Transforms, Laplace Transform of Unit Step Function, Impulse Function, Periodic Function, Dirac Delta Function, Bessel Function, Error Function,

Inverse Laplace Transforms: Important Formulae, Properties of Inverse Laplace Transforms, Partial fraction Method, Convolution Theorem,

Unit III: Solution of Differential Equations:

i) By Laplace Transform: Solutions of ordinary differential equations, simultaneous ordinary differential equations, partial differential equations and evaluation of Integrals using Laplace Transform method.

ii)Solution of Partial Differential Equations by Numerical Techniques:

Numerical solution of parabolic, elliptic and hyperbolic Partial Differential Equations using finite difference technique.

Unit IV: Fourier Transform

Definition and Properties (excluding FFT), Fourier Integral Theorem, Relation with Laplace Transform, Applications of Fourier Transform to Solve Integral Equations.

Unit V: Complex Variables: Integration

Integration of function of complex variables, Cauchy's integral theorem and integral formula, Residue theorem and its use for evaluating Integrals of function of complex variables, evaluation real definite integrals by contour integration; conformal transformations and bilinear transformations.

Elementary Molecular Approach

Subject Code: CE -BS -306 T (BGE)

Lecture : 03 Hrs **No. of Credits : 03**

University Assessment: 70 Marks **College Assessment :30 Marks**

Duration of Examination: 03Hours

Course Objectives:

The student will be able to acquire knowledge in the concepts of Physical Chemistry for engineering applications. These concepts are required in many situations which are faced by chemical engineers in their professional career and to familiarize the

students with different application-oriented topics like solution's thermodynamics, phase eutectic systems, molecular structure of compounds and applications of various spectroscopic techniques.

Course Outcomes: After completion of the course, students will be able:

CO1: To understand solution chemistry and relate it with practical problems.

CO2: To sketch the phase diagram for various solid systems and judge their metallurgical applications.

CO3: To summarize the macromolecules for designing new engineering material.

CO4: To acquire the knowledge on various photo chemical laws and **electronic spectroscopy** and apply it for interpreting the ultraviolet spectra of molecules.

CO5: To understand the basics of nuclear spin resonance spectroscopy and implement this knowledge in structure elucidation of chemical compounds.

Unit 1: Thermodynamics of solutions

A] Raoult's Law, Vapour Pressures of ideal solutions; Activity of ideal solution; chemical potential of ideal solution; Gibb- Duhem- Margules Equation; Free energy, entropy, and enthalpy of mixing

B] Vapour Pressures of real solutions, Vapour Pressure-composition and Boiling Point composition Curves of completely Miscible Binary Solutions; Binary miscible liquids (ideal and non-ideal), azeotropes, lever rule; Nernst distribution law and its Applications, Numericals.

Unit 2: Liquids and Phase equilibria

A] Phase Equilibria: Concept of phases, components and degrees of freedom; derivation of Gibbs Phase Rule for nonreactive and reactive systems; *Clausius-Clapeyron equation*: derivation and its applications to solid liquid, liquid-vapour and solid-vapour equilibria; *Phase diagram for one component systems*: water, CO2 and sulphur. *Two component Eutectic system:* Pb- Ag system, Eutectic system with congruent and incongruent melting point, *Three component systems:* water-chloroform-acetic acid system.

B] Partially miscible liquids: Systems with UCST, LCST and both LCST and UCST-phenol-water, trimethylamine-water, nicotine-water systems. Effect of temperature on CST.

Unit 3: Macromolecules

A] Basic Concepts: Introduction, *Classifications of polymer*: based on origin, structure, mode of synthesis; interparticle forces and thermal response; monomer unit, tacticity and physical properties; degree of polymerization, polydispersity index, *Molecular weights*: Number average, Weight average, Viscosity average molecular weight; *Methods of molecular weight determination*: viscosity, light scattering method, sedimentation velocity method and membrane osmotic pressure method.

B] Polymerization Techniques: *Chain growth/Addition polymerization*: free radical,

cationic, anionic; Step growth polymerization; Coordination polymerization; Ziegler-Natta catalyst.

Unit 4: Molecular Absorption spectroscopy

A] Photochemistry: Thermal and photochemical reaction, Electromagnetic radiation, interaction with atoms and molecules, Lambert Beer law (derivation and deviations from it), laws of photochemistry; Quantum yield, determination of quantum yield, Reasons for high and low quantum yield, numerical; Jablonskii diagram, singlet and doublet state, fluorescence and phosphorescence.

B] Electronic spectroscopy: Characteristics of electromagnetic radiation, Various electronic transitions, Effect of solvent on electronic transitions, Ultraviolet bands for carbonyl compounds, unsaturated carbonyl compounds, dienes and conjugated polyenes. Fieser Woodward rules for conjugated dienes and carbonyl compounds, Ultraviolet spectra of molecules.

Unit 5: ^{1}H NMR SPECTROSCOPY

A] Introduction, Nuclear spin, nuclear magnetic moment, shielding of magnetic nuclei; Chemical shifts, factors influencing chemical shift, Spin-spin splitting; low- and high-resolution spectra, isotopic abundance; Factors influencing coupling constant 'J' – Classification (ABX, AMX, ABC, A2B2etc.), spin decoupling.

B] Mechanism of measurement: Chemical shift values and correlation for protons bonded to carbon: aliphatic, olefinic, aldehydic and aromatic and other nuclei: alcohols, phenols, enols, carboxylic acids, amines and amides; use of NMR in molecular structure diagnostics.

Material Science Laboratory:

Subject Code: CE -GES -307 P (BGE)

Lecture : 0 Hrs **Practical Duration :02 Hr** **No. of Credits: 1**

University Assessment: 25 Marks **College Assessment: 25Marks**

Duration of Examination: 3 Hours

List of Experiments

1. To study the crystal structure of a given specimen.
2. To study the imperfection in crystal.
3. To study the microstructure of mild steel with the help of microscope.
4. To study heat treatment processes (annealing & tempering) applied to a given specimen.
5. To study the thermosetting plastics.
6. To study the creep behaviour of a given specimen.
7. To study the thermosetting plastics.
8. Tensile test on mild steel sample using UTM.
9. Fatigue test on the mild steel sample.

Suggested Books

1. V. Raghavan Materials Science and Engineering: A First Course, 5th Edition Prentice Hall India, 2004.
2. 2. S. Upadhyaya and A. Upadhyaya, Material Science and Engineering, Anshan Publications, 2007.

Elementary Molecular Approach Laboratory:

Subject Code: CE -BS-308 P (BGE)

Lecture : 0Hrs **Practical Duration: 03H** **No. of Credits: 1.5**

University Assessment: 25Marks **College Assessment :25 Marks**

Duration of Examination: 03Hours

Course Objectives:

- Students will be skilled in problem solving, critical thinking and analytical reasoning as applied to the concepts of Physical Chemistry for engineering applications.

- Students will be able to clearly communicate the results of scientific work in oral, written and electronic formats their professional career.
- Students will be able to explore new areas of research in solution thermodynamics, phase eutectic systems, liquid-liquid extraction, electrochemistry, concept of interfaces and surfaces chemistry, photochemistry and polymers.
- Students will be able to function as a member of an interdisciplinary problem solving team in both chemistry and allied fields of science and technology..

Course Outcomes:

CO1. To acquire practical knowledge on the basic chemistry principles for apply in chemical engineering.

CO2. To acquire training in accurate and precise data collection

CO3. To acquire practical knowledge of the phase diagrams and its application in metallurgy,

CO4. To acquire practical knowledge of analytical techniques like conductometric and spectroscopic techniques and solvent extraction process to deal with practical problems.

LIST OF EXPERIMENTS

1. To study the distribution of succinic acid in H2O- toluene, H2O-ether and comparison of distribution coefficient.
2. To study the $KI_3 \rightarrow KI + I_2$ equilibrium in aqueous solution.
3. To construct the phase diagrams of two components system (phenol- water) and study the effect of 1% NaCl, 1% succinic acid, 0.5% naphthalene on CST in phenol-water systems.
4. To study the phase diagram of ternary system (Toluene-Acetic acid-water; Ethyl acetate-acetic acid, water).
5. To study the mutual solubility of a) Nicotine-water, and b) glycerol-m-toluidine and determine consolute points.
6. To find out the constant of conductivity cell and hence determine the dissociation constant of a weak acid.
7. To determine CST of phenol and water in presence of a) 1% NaCl, b) 0.5% naphthalene and c) 1%succinic acid.
8. To determine the conductometric titration curve in the neutralization of strong /weak acids against a strong/weak bases.
9. To determine the volume percentage of pure ethanol in a given solution of it in Benzene by surface tension measurement.
10. To study the coagulation of ferric hydroxide sol with KCl, K_2SO_4 and $K_3[Fe(CN)_6]$ and find their coagulating value.

11. To determine the wavelength of maximum absorption and to verify the Beer's law for $KMnO_4$ / $K_2Cr_2O_7$ solution.
12. To determine ferrous ions in a given sample spectrophotometrically by O-phenathroline method.
13. To determine the molecular weight of a high polymer (polystyrene) by viscosity measurement.
14. Potentiometric titration of acetic acid against NaOH and to determine the dissociation constant of acid.
15. To study the molecular condition of benzoic acid in Toluene by determining the partition co-efficient between Toluene and water.

Engineering Workshop:

Subject Code : CE -GES-309 P (BGE)

Lecture : 0 Hrs **Practical Duration:03 Hr** **No. of Credits:1.5**

University : 25 Marks **College Assessment : 25 Marks**

Duration of Examination: 03Hours

Objectives:

The idea of this course is to understand the concepts involved in product realization by carrying out manufacturing shop exercises. Hands-on practice with manufacturing shop exercises and assembly leading to realization of a new product in a group. Students will also be introduced to the importance of manufacturing planning.

Course outcomes

Students will realize the importance of:

- Manufacturing planning.
- Computer numerically controlled machines.

List of Experiments

1. Introduction to the course and its objectives; mandatory briefing on shop-floor safety. Introduction to all manufacturing forms and introduction to basic tools (hand tools and power tools).

2. Overview of engineering materials and forms in which they are commonly available as raw materials. Typical component manufacture with materials like wood.

3. Overview of shape realization by manufacturing, measurement of manufactured parts. Associated with: Machine shop exercises- involving sawing, turning and drilling, milling, grinding and joining. Inspection of manufactured component using simple metrology instruments.

4. Overview of computer numerically controlled machines Machine shop exercise using CNC - Part modelling, CNC program generation and cutting part on CNC milling machine.

5. Use of plastics and composites as engineering materials. Practical: Hands-on exercise involving plastics - use of injection moulding, extrusion etc.

Particle & Fluid Processing Lab

Subject Code : CE - PCC -310P(BCE)

Lecture : 0 Hrs Practical Duration 03 H No. of Credits: 1.5

University Assessment: 25 Marks College Assessment : 25 Marks

Duration of Examination: Hours

Objective: The course aims at performing the experiments and getting hands-on experience on concepts such as, the properties, size-reduction and handling of solids and solid-fluid mixtures, separation processes for solid-solid and solid-fluid mixtures, concepts of filtration, agitation and mixing of liquids, and packed and fluidized beds

CO 1: The student would understand the physical properties, property measurement and handling of solid-solid and solid-fluid mixtures.

CO2 . The student would understand separation processes for solid-solid and solid-fluid mixtures. **CO3**. To understand the processes involved in agitation and mixing of liquids

CO4:. To understand the working and applications of solid-storage and conveying, and flow through packed and fluidized beds

List of Experiments :

1) To study relationship between the Drag coefficient and modified Reynolds number for body falling throughfluid (Cd Vs NRE)

2) To carry out the batch sedimentation test and use results to design the thickener

3) To determine the efficiency of Mineral Jig

4) To establish the filtration equation for the leaf filter system and to evaluate compressibility of cake.

5) To study the power consumption of an agitator with Reynolds and Froude number

6) To verify the laws of crushing and grinding

7) To determine the mean arithmatic diameter, mean surface diameter and mean volume diameter

8) To determine the size distribution in a given sample (Elutriation)

9) To determine the effectiveness of vibrating screen

10) To separate the various size fraction in a mixture on the basis of their settling velocities in a fluid (s ize separation)

11) To determine the efficiency of a cyclone separator.

12) To study separation in cone classifier.

13) To study the operation of hammer mill and determination of efficiency of hammer mill

14) To study working principle of froth flotation cell

15) To study the magnetic separator and to determine the efficiency of magnetic separator.

Science and Technology,

R.T.M. Nagpur University, Nagpur.

Syllabus for B.Tech. Chemical Engineering

(Fourth Semester)

Process Technology & Economics (Theory):

Subject Code: CE-PCC-401T (BCE)

Lecture : 3 Hrs Tutorial: 1 Hr No. of Credits 03

University Assessment: 70 Marks **College Assessment: 30 Marks**

Duration of Examination: 3 Hours

Course Objectives: The objective of this course is to introduce students with basic block diagram and simplified process flow diagram for manufacture of various inorganic chemicals, Petrochemicals, Petroleum refining and cracking operations. This course also provide basic understanding for common utilities required for manufacturing process. It also provides understanding for various components of project cost and their estimation.

Course Outcomes: After completion of the course, students will be able:

CO1 :understand about Raw materials, operating conditions, basic block diagram and simplified process flow diagram for manufacturing of inorganic chemicals

CO2 :understand about R Raw materials, operating conditions, basic block diagram and simplified process flow diagram for manufacturing for Petroleum refining and cracking operations, syngas and hydrogen

CO3 : understand about RRaw materials, operating conditions, basic block diagram and simplified process flow diagram for manufacturing of various Petrochemicals

CO4:understand about R Industrially relevant fuels, coal, coal based chemicals and fuels Common utilities

CO 5: get an Idea about Introduction to project, Various components of cost of production and their estimation and analysis of working results project

Unit 1: Description, raw material and energy sources and consumptions, operating conditions, catalysts, basic block diagram and simplified process flow diagram for manufacture of inorganic chemicals, such as: inorganic acids, chlor-alkali, ammonia, fertilizers, etc.

Unit 2: Description, raw material and energy sources and consumptions, operating conditions, catalysts, basic block diagram and simplified process flow diagram for Petroleum refining and cracking operations, syngas and hydrogen,

Unit 3 Description, raw material and energy sources and consumption, operating conditions, catalysts, basic block diagram and simplified process flow diagram for manufacture of Petrochemicals: C1, C2, C3, C4, etc., benzene, toluene, xylene and other petrochemicals from these basic building blocks

Unit 4 Industrially relevant fuels, coal, coal-based chemicals and fuels Common utilities such as electricity, cooling water, steam, hot oil, refrigeration and chilled water

Unit 5: Introduction to project cost and cost of production, Various components of cost of production and their estimation, Various components of project cost and their estimation, Estimation of working capital. Analysis of working results project: Balance sheets, Project financing, concept of interest, time value of money, depreciation. Profitability Analysis of Projects

Mass Transfer I (Theory)

Subject Code: CE-PCC-402T (BCE)

Lecture : 3 Hrs **No. of Credits 03**

University Assessment:70 Marks **College Assessment: 30Marks**

Duration of Examination: 3 Hours

Objective: The objective of this course is to understand the principles of diffusion, convective mass transfer, theories of mass transfer, gas absorption and distillation. This basic knowledge will be useful to design various mass transfer equipment's.

Course Outcomes: After completion of the course, students will be able:
CO 1: To understand concept and theories of diffusion.

CO 2: To understand convective mass transfer, interphase mass transfer and theories of mass transfer and their applications.

CO 3: To understand gas absorption in plate and packed column and design; absorption in wetted wall columns, packed tower and spray tower.

CO 4: : To understand absorption in tray towers, tray efficiencies, calculation of number of trays for absorption, Equipments for Absorption

CO5: To understand Batch distillation; continuous binary fractionation Azeotropic distillation multicomponent distillation and Methods of distillation

Unit I : Constitutive laws of diffusion; unsteady state diffusion Introduction to mass transfer, concept of diffusivity, Molecular diffusion in gases, liquids and solids, diffusivities of gases and liquids, types of diffusion, Fick's and Maxwell law of diffusion, Eddy diffusion, Steady state molecular diffusion. Empirical equations used to determine diffusivity through gas and Liquid

Unit II Convective mass transfer, interphase mass transfer and mass transfer coefficients, mass transfer correlations Mass transfer theories/models Effect of chemical reaction on mass transfer Concept of mass transfer coefficients, their relationship, mass transfer under laminar and turbulent flow past solids, boundary layers, mass transfer at fluids surfaces correlation of mass transfer coefficients, J D , HTU, and NTU concepts, theories of mass transfer, interphase mass transfer and overall mass transfer coefficients, application to gas-liquid and liquid-liquid systems.

Unit III Equilibrium stages and transfer units: number and height of transfer units; stage efficiency. Gas absorption plate and packed column design; reactive absorption Mechanism of gas absorption, equilibrium in gas absorption, absorption in wetted wall columns, estimation of transfer coefficient, absorption in packed tower and spray tower, calculation of HETP, HTU, NTU, calculation of height of packed and spray tower.

Unit IV : Absorption in tray towers, absorption and stripping factors, tray efficiencies, calculation of number of trays for absorption, Equipment for Absorption

Unit V Batch distillation; continuous binary fractionation Azeotropic distillation; use of steam Introduction to multicomponent distillation Vapour – liquid equilibria for ideal and non-ideal systems, positive and negative deviations from ideality, relative volatility. Methods of distillation - differential, flash, low pressure, batch rectification, Continuous rectification for binary system, multistage (tray) towers, Lewis – Sorel, McCabe Thiele Method, Multiple feeds, side streams, tray efficiencies, NTU, HTU, HETP concept and calculations concept of reflux, Underwood-Fenske equation, Partial and total Condensers, reboilers, Ponchon Savarit method

Fluid Mechanics:

Subject Code: CE - PCC-403T (BCE)

Lecture : 03Hrs **Tutorial: 01 Hr** **No. of Credits: 04**

University Assessment: 70 Marks **College Assessment: 30 Marks**

Duration of Examination: 03Hours

Objective: The objective of this course is to understand the fundamentals of fluid flow phenomena. Deriving the mass and momentum balance equations from first principles. To learn about the transportation of fluids and flow measuring devices.

Course Outcomes: After completion of the course, students will be able:

CO1: To understand the basic properties, classification of fluid and fluid statics.

CO2: To understand the fluid energy balance, energy losses and various pipe fitting

CO3: To understand Velocity Distribution, Fluid Friction and Two-phase flow, and flow patterns in two phase flow.

CO4: To understand various flow working principle and expressions for flow rate measuring meters

CO5: To understand Transportation of fluids, Classification of pumps and their properties.

Unit –I

Introduction to fluids: fluid, Properties of fluids, Classification of fluids, Continuum hypothesis, Forces on fluids, Normal and shear stresses, Shearing and flow, characteristics of Newtonian and Non-Newtonian fluids, Shear stress distribution of

fluids. Fluid statics: Pascal law, Hydrostatic equilibrium law, Pressure distribution & Manometry, U-tube, Inverted U-tube, Differential and Inclined manometers.

UNIT-II

Bernoulli`s equation, Continuity equation, Frictional loss in pipe, Hydraulic mean diameter, losses due to enlargement and contraction of pipe cross - section. Equivalent length of pipe, Pipe fittings, Gate, Globe, Check and Butterfly valves, Boundary layer development

Unit-III

Velocity Distribution for, Viscous & Turbulent flow through Pipe & Parallel plates. Fluid Friction in pipe: Friction factor, Head loss in pipe flow, Colebrook and White equation, Moody diagram, , Two-phase flow, Flow patterns in two phase flow. The Baker diagram, Erosion in two phase flow

Unit-IV

Flow measurement: Flow rate measurement, Working principle and expressions for flow rate through Pitot tube, Orifice meter, Venturimeter, variable area flow meter, Notch and Weir, Coefficient of discharge.

Unit-V

Transportation of fluids - Classification of pumps, Positive displacement pumps, Reciprocating, Pump, Plunger pump, Diaphragm pump, Metering pump, Rotary gear pump, Rotary lobe Pump, Rotary vane pump, Flexible vane pump, Mono pump, Cetrifugal pump, Volute pump, Volute pump with vortex chamber and diffuser vanes, Cavitation, Priming, Net positive suction head

Numerical Methods in Chemical Engineering

Subject Code: CE - PCC -404T (BCE)

Lecture : 02 Hrs **No. of Credits: 02**

University Assessment: 35 Marks **College Assessment :15Marks**

Duration of Examination: 03 Hours

Objective : This course has been designed to develop the understanding the computational methods to solve the problems related to the chemical engineering applications. The students are exposed to learn the basic principles, and logical skills in solving the problems using computational methods.

Course Outcomes: After completion of the course, students will be able:

CO1 : To understand and apply various linear algebraic equations to chemical engineering problems

CO2 : To understand and apply Root finding methods for solution on non-linear algebraic equations to chemical engineering problems

CO 3: To understand and apply Interpolation and Approximation various methods **to chemical engineering problems**

CO4 : To understand and apply various methods of : Numerical integration and numerical differentiation to **chemical engineering problems**

CO5 : To understand and apply various Ordinary Differential Equations **and** Partial

Differential Equations to **chemical engineering problems**

Unit I : Introduction, Approximation and Concept of Error & Error Analysis, Linear Algebraic Equations: Methods like Gauss elimination, LU decomposition and matrix inversion, Gauss-Siedel method, Chemical engineering problems involving solution of linear algebraic equations

Unit II : Root finding methods for solution on non-linear algebraic equations: Bisection, Newton- Raphson and Secant methods, Chemical engineering problems involving solution of non-linear equations

Unit III : Interpolation and Approximation, Newton's polynomials and Lagrange polynomials, spline

interpolation, linear regression, polynomial regression, least square regression

Unit IV : Numerical integration: Trapezoidal rule, Simpson's rule, integration with unequal segments, quadrature methods, Chemical engineering problems involving numerical differentiation and integration

Unit V : Ordinary Differential Equations: Euler method, Runge-Kutta method, Adaptive Runge-Kutta method, Initial and boundary value problems, Chemical engineering problems involving single,and a system of ODEs . Introduction to Partial Differential Equations: Characterization of PDEs, Laplace equation, Heat conduction/diffusion equations, explicit, implicit, Crank-Nicholson method

Inorganic Process Technology:

Subject Code: CE- BS-405 T(BGE)

Lecture : 03 Hrs **No. of Credits: 03**

University Assessment: 70 Marks College Assessment: 30 Marks

Duration of Examination: 03 Hours

Course Objectives:

Students will be able to understand sources and processes of manufacture of various important inorganic chemicals having industrial applications.

Course Outcomes: The student on completion of course will be able:

CO1 To understand the knowledge of unit operations and apply them in production of industrial gases & acids.

CO2 To understand the concepts, remember & apply the knowledge in the production process of different types of Industrial carbon and pigments.

CO3 To understand the concepts & remember the processes in nuclear industries.

CO4 To understand the manufacturing processes of Electrolytic & electro-thermal products

CO5 To understand the production process of different fertilizers.

Unit I Industrial gases & Acids: Manufacture of CO_2, H_2, N_2 & O_2, Ar, ammonia and C_2H_2 and their industrial applications. Manufacture of nitric acid, sulphuric acid, Phosphoric acid and their industrial applications.

Unit II Industrial Carbon & Inorganic pigments: Manufacture & applications of, Lamp black, Carbon black, Activated carbon, Graphite, Industrial diamond. Manufacture, properties & uses of white pigments- white lead, zinc oxide, titanium dioxide and Lithophone.

Unit III Nuclear industries: Nuclear fission & fusion reactions, Feed materials, extraction of Uranium, uranium enrichment, nuclear reactor, reprocessing of nuclear materials, protection from radioactivity.

Unit IV Chloro-Alkali & Electrolytic and Electrochemical industries: Manufacture of Soda ash by Solvay's & modified Solvay's process, Types of electrolytic cells for Caustic soda & Chlorine manufacture – Nelson, Hookers, Castner Kellner, De-Nora & Membrane cells. Manufacture of potassium chlorate & per- chlorate. Artificial abrasives: Calcium carbide, Silicon carbide.

Unit V Fertilizers: Classification of fertilizers, manufacture & applications of urea, ammonium nitrate, ammonium sulphate, Super phosphates & triple super phosphates, monoammonium and Diammonium phosphate, Potassic, compound & complex fertilizers.

HASS II Functional English:

Subject Code: CE- HSMC-HS-406 T (BGE)

Lecture : 02 Hrs **No. of Credits : 02**

University Assessment: 35 Marks **College Assessment :15 Marks**

Duration of Examination: 02 Hour

Objective: At the end of the semester, students will have enough confidence to face competitive examinations (IELTES/ TOEFL/CAT/ MAT/ XAT/SNAP/GMAT/GATE etc.) to pursue master's degree. They will also acquire language skills required to write their Reviews/Projects/Reports. They will be able to organize their thoughts in English and hence face job interviews more confidently.

Scope: The Curriculum designed is student –cantered and it is guidance for their career.

Course Outcomes: After completing the course, students will:

1. Acquire knowledge of structure of language.
2. Be able to face competitive exams and the interview process and can become employable.
3. Develop business writing skills.
4. Become familiar with technology enabled communication and can develop technical and scientific writing skills.

Unit 1. Functional Grammar:

Common errors, Transformation of Sentences, Phrases, Idioms & Proverbs.

[50 sentences of common errors, 50 examples of Transformation of Sentences, (5 each type), 50 noun/prepositional phrases, 50 idioms/proverbs]

Unit II. English for Competitive Exams & Interview Techniques:

IPA (vowel & consonant phonemes), Word building (English words /phrases derived from other languages), Technical Jargons, Synonyms/Antonyms, Analogies, Give one word for, Types & Techniques of Interview

Assignment: [25 Words for teaching IPA, 25 words/phrases of foreign origin, 25 technical jargons, 25 words for Synonyms/ Antonyms, 25 words for Analogies, 50 examples of give one word for]

Unit III. Formal Correspondence

Business Letters, e-mail etiquettes [Orders, Complaints, Enquiries, Job applications and Resume Writing, Writing Memorandum, Circulars, notices], Analytical comprehension:

[Four fictional & four non-fictional unseen texts]

Unit IV. Technical & Scientific Writing:

Features of Technical Writing, Writing Scientific Projects, Technical Report writing, Writing Manuals, Writing Project Proposals, Writing Research papers.

Assignment: (Any one project/review as assignment)

Reference Books:

9. Developing Communication skills by Krishna Mohan & Meera Banerjee

Fluid Mechanics Lab

Subject Code : CE - PCC -407P (BCE)

Lecture : 0 Hrs Practical Duration 02H No. of Credits :1

University Assessment: 25 Marks College Assessment :25 Marks

Duration of Examination: 3 Hours

Objective: The course aims on the properties of fluids and the energy relationships in fluid systems. The fluid mechanics approach to solve typical problems in turbulent flow, calculation of turbulent boundary layers with pressure gradient, transition from laminar to turbulent flow, volumetric and mass flow rates through the Venturi meter and Orifice meter and efficiency of pumps

CO1: The student must be able to approach and solve typical problems in fluid dynamics at the appropriate level.

CO 2. Students will be able to understand the fluid dynamics and also the principles of turbulent flow, calculation of turbulent boundary layers with pressure gradient, transition from laminar to turbulent flow.

CO3. Learn tomeasurevolumetric and mass flow rates through the Venturi meter and Orifice meter and efficiency of pumps.

CO4. Ability to understand and analyze the applications to industrial flows.

List of Experiments

1) To verify Bernoullis equation

2) To calibrate venturimeter and and obtain its coefficient of discharge

3) To calibrate orificemeter and obtain its coefficient of discharge

4) To calibrate Rotameter

5) To calibrate notched weir and and obtain its coefficient of discharge

6) To study friction factor Vs Reynolds number for flow of water in a pipe

7) To study friction factor Vs Reynolds number for flow of air in a pipe

8) To study the relationship between Fanning friction factor Vs Reynolds number for flow of fluid through coils.

9) To obtain equivalent length of pipe for various pipe fittings

10) To study the operating characteristics of centrifugal pump.

11) To study the hydrodynamic characteristics of packed bed

12) To study the hydrodynamic characteristics of a fluidized bed

13) To study two phase flow.

Numerical Methods in Chemical Engineering Lab (Practical)

Subject Code : CE - PCC -408P (BCE)

Lecture : 0 Hrs **Practical Duration :02 Hr** **No. of Credits:1**

University Assessment: 25 Marks **College Assessment: 25 Marks**

Duration of Examination: 03 Hours

List of Experiments

1. Introduction to use of computers for numerical calculations
2. Solution of linear algebraic equations using Gauss elimination, Gauss-Siedel etc.
3. Solution of a non-linear equations using bracketing and Newton-Raphson method
4. Interpolation and Approximation
5. Numerical integration
6. Euler method
7. Runge-Kutta methods for ODEs
8. Solution of system of ODEs using simple methods
9. Solution of simple PDEs

Inorganic Process Technology Laboratory:

Subject Code CE- BS-409 P (BGE)

Lecture : 0 Hrs **Practical Duration:03 Hr** **No. of Credits:1.5**

University Assessment: 25 Marks **College Assessment: 25 Marks**

Duration of Examination: 03 Hours

LIST OF EXPERIMENTS

1. To Prepare the Crystals of Chrome alum.

2. To Prepare Mohr's salt.

3. To estimate the amount of impurities in a given sample of common salt.

4. To purify the given sample of Common salt.

5. To Prepare Cuprous Chloride .

6. To estimate the % available Chlorine in a given sample of Bleaching powder.

7. To Prepare the Crystals of Sodium Thiosulphate.

8. To estimate the amount of ferrous & ferric in pigment Red Oxide.

9. To Prepare the Crystals of Ferrous Sulphate from Kipp's apparatus waste.

10. To estimate Sulphate in a given solution by EDTA method.

Environmental Sciences : MC **Audit Course**

Teaching Scheme: 2 Hours/ Week

Course Objectives:

The student on completion of course will understand the Ecosystem, Environmental issues related with social and human population, Biodiversity and its conversion.

Course Outcomes: The student on completion of course will be able:

CO 1: To understand and apply the Multidisciplinary nature of environmental studies.

CO 2: To understand the importance of Natural Resources and its conservation.

CO 3: To understand the classification of ecosystem and importance of conservation of biodiversity.

CO 4: To understand the sources of pollution, ill effects of pollution and prevention methods of pollution.

Unit 1: Multidisciplinary nature of environmental studies: Definition, scope and importance

Need for public awareness.

Unit 2: Natural Resources: **Renewable and non-renewable resources**:

Natural resources and associated problems.

a) Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forest and tribal people.

b) Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.

c) Energy resources: Growing energy needs, renewable and non-renewable, energy sources, use of alternate energy sources. Case studies.

d) Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles.

Unit 3: Ecosystems; Concept of an ecosystem. Structure and function of an ecosystem. Producers, consumers and decomposers. Energy flow in the ecosystem. Ecological succession. Food chains, food webs and ecological pyramids.

Introduction, types, characteristic features, structure and function of the following ecosystem: -

a. Forest ecosystem b. Grassland ecosystem c. Desert ecosystem d. Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

Biodiversity and its conservation: Introduction – Definition: genetic, species and ecosystem diversity. Biogeographical classification of India, Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values, Biodiversity at global, National and local levels, India as a mega-diversity nation, Hot-sports of biodiversity. Threats to biodiversity.

Unit 4: Environmental Pollution

Definition • Cause, effects and control measures of: - a. Air pollution b. Water pollution c. Noise pollution d. nuclear hazards. Solid waste Management: Causes, effects and control measures of urban and industrial wastes. • Role of an individual in prevention of pollution. • Pollution case studies.

Project work: Case studies
